

## Waste system in Pranburi Beach Village

New bins have to be purchased to all houses which is charge for service fee (Round, black bins with lids at about 100 liters).

Plastic bags which fit the bin have been bought. All the waste will be inside the bag. When gardeners remove waste, every Monday, Wednesday and Friday, they grab the bag, tie together and remove the waste.

Waste bags are to be placed in municipal barrels or remain uploaded on the push wagon until the garbage trucks have collected the waste. This happens just before the cars arrive. Security guards monitor that no dogs or birds destroy the sacks.

We have got 3 bigger waste bins with wheels (about 200 liters) and establish a small "recycling center" inside the PBV. These will be placed at the in the main street in PVB.

One is labeled:	<b>Bottles and Cans</b>
The second is labeled:	<b>Cardboard and Paper</b>
The third is labeled:	<b>Metal and Electronics</b>

These are fractions gardeners wish to recycle/sell.

**The drums will only be used for this purpose.** The gardeners are responsible for emptying the bins and to control that it all times is clean and tidy around the boxes.

Owners themselves throw this waste in the boxes as needed.

### **Note:**

By the described remediation scheme, we believe that we can achieve several benefits:

- Gardeners should not open waste bags and search for "values"
- It will not be stored any waste on the inside or outside of PBV (avoiding pests)
- Waste management is cleaner and environmentally better.

When leaving the house permanently, please put the garbage bin in the store room.

Houseowners are responsible for cleaning the bins.
